About Project LockStep

Project LockStep is a student cybersecurity awareness campaign. Its purpose is to show how everyday users can protect their online accounts from password attacks, phishing and identity theft by using strong, unique passwords and multi-factor authentication (MFA).

Why one lock is not enough

Passwords are important, but they are not enough. If a password is weak, reused, or stolen through phishing, an attacker may access your account. **If you reuse a password, one stolen password can put several accounts at risk.**

Turn on multi-factor authentication

MFA adds another verification step, such as an authenticator-app code, passkey, security key, or fingerprint. Use the strongest option available, especially a security key or passkey where supported.

Two-factor authentication (2FA) is one type of MFA.

Start with: your email, student portal, financial accounts, and cloud storage.

(Cybersecurity and Infrastructure Security Agency, n.d.; 2023)

Security practices

Five steps that protect you against the threats overleaf:

1. **Turn on MFA.** Enable MFA on important accounts such as email, student portals, banking, cloud storage, and social media. Choose a security key, passkey, or authenticator app where available.
2. **Use unique passwords.** Use a long, unique password or passphrase for every account. A password manager can help create and store them securely.
3. **Install updates promptly.** Turn on automatic updates where possible. Updates often fix security weaknesses that attackers could exploit.
4. **Stop and check.** Be cautious with unexpected links, attachments, login requests, and one-time-code requests. Verify the sender using an official channel.
5. **Report suspicious activity.** Report suspicious messages, unexpected MFA prompts, and possible account compromise to your official university IT helpdesk or service provider.

(Cybersecurity and Infrastructure Security Agency, 2024; 2025a; 2025b)

PROJECT LOCKSTEP

Lock every door. Add a second key.

Lock every door. Add a second key.

Stronger account security
for a safer student life

Secure accounts.
Safer devices.
Greater peace of mind.

Cybersecurity Awareness Campaign

Three common cybersecurity threats

Password attacks

Attackers may guess weak passwords or try passwords exposed in previous breaches.

Defence: Use a long, unique password for every account.

Phishing

Fake emails, messages, websites, or calls can trick you into revealing passwords, PINs, or one-time codes.

Defence: Check the sender and website address before signing in.

Identity theft

Criminals may use stolen personal information or a compromised account to impersonate you or access other services.

Defence: Protect personal information, secure your email, and report suspicious activity quickly.

(Cybersecurity and Infrastructure Security Agency, 2024; 2025b)

Cybersecurity awareness tips

Awareness tip	What to do
Think before you click	Hover over a link to see where it really goes before you open it.
Pause on urgency	Be suspicious of messages that demand immediate action. Verify through an official channel.
Keep codes private	Never share a one-time code or approve an MFA request you did not start.
Check the sender	Check the sender and website address before you sign in.
Watch your alerts	Take unexpected sign-in or MFA notifications seriously and report them.

STOP BEFORE YOU APPROVE

Never approve an MFA request or share a one-time code unless you started the login. An unexpected prompt may mean someone already has your password.

MFA reduces risk, but it does not replace careful phishing awareness.

(Cybersecurity and Infrastructure Security Agency, 2023; 2024; National Institute of Standards and Technology, n.d.)

Think your account is compromised?

Act quickly. The sooner an incident is reported, the sooner your account can be secured:

1. Change your password using a trusted device.
2. Sign out of other sessions.
3. Enable MFA.
4. Contact your university's official IT helpdesk.
5. If money is involved, contact your bank or mobile-money provider through its official app or verified website.

Report a cybersecurity incident

Contact number:+267 000 00000

Email: security@lockstep.com

Website: www.lockstep.bw

Example contact details for this educational project only. This is not an official university helpdesk.
